ART-012 - TWO DIMENSIONAL DESIGN

This course is an introduction to the theories and applications of two-dimensional form in visual art and design. The students will use a variety of media, tools and techniques in studying the elements and principles of design, which includes the study of line, shape, volume, value, color, texture, pattern, illusion of spatial depth, balance, unity and variety, and scale. The course emphasizes the development of visual vocabulary for creative expression through lecture presentation, studio projects, problem solving and written assignment. Field trips may be included.

ART-013 - THREE DIMENSIONAL DESIGN

This course is an introduction to the theories and applications of design in three-dimensional form in space. Students study the elements and principles of design using a variety of tools, techniques, and mediums which may include wire, cardboard, clay (non-firing), wood, plaster, and other materials at the instructor's discretion, in a studio lab setting. Concepts are introduced and clarified through instructor's lectures and demonstrations. Three-dimensional design is a core foundational course required in many art majors. Field trips may be included.

ASTRO-010 - INTRODUCTION TO ASTRONOMY

This is an introductory science course for non-science majors covering topics of modern Astronomy. It highlights pivotal aspects in the history of Astronomy such as its distinction and further separation from Astrology. It lists the physical processes governing the origins of a star system and indicates the causes of the apparent motion of sky objects and cyclic sky events. The sources of periodical astronomical events such as phases of the moon, solar and lunar eclipses, meteor showers, and seasons are identified and related via the fundamental laws of physics. The astronomical tools of photometry and spectroscopy are introduced for their indispensable role in analysis towards the detection of planets around other stars, the investigation of dark matter and dark energy, and the ongoing search for extraterrestrial life. Additional topics include the origins of galaxies, large scale structure, and a full description of the Big Bang theory.

ASTRO-010L - INTRO LAB GENERAL ASTRONOMY

This is an introductory laboratory course in Astronomy designed for non-science majors. It incorporates substantial number of contact hours at the Montgomery Hill Observatory, making use of the state of the art telescopes, CCD cameras, and various adapters for cell phones. Students will identify constellations and asterisms, measure the apparent motion of planets and stars, and investigate the geology of terrestrial objects throughout the solar system. A series of lab exercises will demonstrate main behaviors of light and its interaction with matter. This course will cover the different stages of stellar evolution, making use of computer simulations to illustrate changes in size and energy output of stars, as they age. Course work will conclude with explorations on large scale structures such as galaxies, clusters of galaxies, and the expanding Universe.

AUTO-118 - FUEL SYSTEMS/EMISSION CONTROLS

This course covers automotive fuel systems, including: tanks, pumps, lines, filters, idle and vacuum control devices, electronic fuel injection, and emission control devices. Emphasis will be placed on combustion chemistry and emission testing procedures, and the diagnosis and repair of fuel and emission control system components. Students will diagnose and repair hard start, no-start, poor performance, and emission failures on a range of vehicles using the latest test equipment and methods. This course provides significant preparation and experience for those pursuing licensing as CA emission technicians.
Prerequisite: AUTO 102, AUTO 103, AUTO 119 and AUTO 170 all with C or better

Reg ID 132853 | Section 201 | 2.5 units | Active

Enrollment 0 / 24 | Open seats: 24 | Waitlist: 0 | Open seats

Type	Days	Time	Dates	Room	Section instructor(s)
Lecture	MTWTh	07:30 AM - 08:35 AM	04/20/27 - 05/20/27	AT138	Tran, Long
Lab	MTWTh	08:45 AM - 11:10 AM	04/20/27 - 05/20/27	AT 129	Tran, Long

Note: This is a traditional in-person, ON-CAMPUS class with scheduled meetings on the days and times listed above. Class may be web-enhanced using Canvas and/ or other applications. For additional class-specific requirements, please email the course instructor.

AUTO-119 - INTRO TO ENGINE PERFORMANCE

This course is part of the Automotive Basic Skills track emphasizing engine systems relevant to performance and driveability. Classroom theory, engine analyzers and test equipment will be utilized to diagnose modern automobile engine systems. Engine diagnostic strategies will be performed in the lab as they would be in the workplace. In addition to gaining hands-on experience, successful students will build teamwork and cooperative skills, improve their time management practices, and develop sound workmanship values.
Prerequisite: AUTO 102 and AUTO 103 both with C or better or equivalent or AUTO 102 with C or better or equivalent and concurrent enrollment in AUTO 103; Previous Or Concurrent: AUTO 103 with C or better or equivalent or concurrent enrollment

AUTO-120 - AUTOMATIC TRANSMISSION SYSTEMS

This course will prepare students to diagnose and repair front and rear-wheel drive automatic transmission systems. Topics include stall and pressure testing, torque converters, planetary, CVT, and helical gear systems, overhaul practices, valve body repair, and on-car service techniques, covering both theoretical and practical application. Computerized power-train diagnosis and repair will also be covered, preparing students for the A2 Automatic Transmission/Transaxle Exam.
Prerequisite: AUTO-102 with C or better

Subject: AUTO

AUTO-121 - TRANSMISSION AND DRIVETRAIN

This course will prepare students to diagnose and repair front and rear-wheel drive manual transmission systems, clutches, drive lines, differentials, and CV axles. Various gear designs will be studied, including helical, hypoid, bevel, and straight cut gear systems, and their influence on ratio calculation and torque multiplication. Overhaul practices such as teardown, measurement, inspection, repair, and reassembly will be covered. Four-wheel drive systems, including automatic locking hubs, transfer cases, and electronic drive-train systems, are also explored to prepare students for the A3 Manual Drive Train & Axles ASE Exam.
Prerequisite: AUTO-102 with C or better

AUTO-122 - ADVANCED ELECTRICAL SYSTEMS

This is an advanced automotive electrical course stressing diagram-based diagnostic methods. Students will design and build functioning circuits and systems, as well as compute and measure all aspects of performance. Students will learn to diagnose and repair a wide variety of circuit, system, and component faults in general electrical, starting, charging, lighting, instrumentation, accessory, climate control, audio, navigation, and SRS systems. Analytical skills and use of specialized test equipment will be stressed to provide students with excellent and highly marketable diagnostic abilities.
Prerequisite: AUTO-170 with C or better

AUTO-135 - AIR CONDITIONING SYSTEMS

This course will prepare students to diagnose and repair modern heating ventilation and air conditioning systems. Topics studied include systems inspection, diagnosis, and repair, leak testing, performance testing, mode control, refrigerant identification, recovery, flushing, evacuation, recharging, and safe handling procedures. Students will also learn to diagnose component malfunctions and using various refrigerant types. AUTO 135 and 174 prepare students for the ASE Air Conditioning exam.
Prerequisite: AUTO 102 with C or better

AUTO-138 - OCCUPATIONAL WORK EXPERIENCE

Occupational Work Experience is designed for students who work or volunteer in a field related to their career major. Students are required to provide evidence that they are enrolled in an automotive technology course(s). Students can earn one unit of credit for each 54 hours of work during the semester. Students can repeat Occupational Work Experience, combined with General Work Experience, or alone, up to a maximum of 14 units. Internship/job placement is not guaranteed.

AUTO-170 - ELECTRICAL SYSTEMS

This course introduces students and entry level automotive technicians to the automotive electrical system. The course covers DC electrical theory, magnetism, Ohm's law, series and parallel circuits, passive components, and system dynamics. Students learn to calculate and measure voltage, resistance and current in theoretical and live circuits, build and test working models of typical automotive electrical systems using table top components and industry specific simulators, and practice diagnosis and repair procedures on a variety of vehicles. Students will also develop an understanding of modern electrical test equipment and industry standard troubleshooting and repair procedures. This course will prepare students for the ASE A6, Automotive Electrical Systems, certification examination.
Prerequisite: AUTO 102 with C or better

AUTO-182A - TESLA SERVICE TECHNICIAN (A)

This course is part of a series of four courses that will provide the technical skills necessary to gain successful employment with TESLA Motors as a service technician. The focus of this course is to provide an overview of Tesla History, Safety, Product, Specialized Tools, High Voltage System, and Service Operations. This course is suitable for students who have completed a two-year automotive technology program or have experience as a vehicle service technician. A formal application and interview process are required for acceptance into this course.

BIOL-004A - CELL AND MOLECULAR BIOLOGY

This is the first course in a two term majors-sequence for students preparing for careers in the sciences, science education, biochemistry, or medicine. This lecture and laboratory course emphasizes the nature of science and the scientific method, and fundamental principles and theories in biology at the molecular and cellular level. Topics will include biological chemistry, cell structure and function, bioenergetics, cell reproduction, Mendelian inheritance, molecular genetics, biotechnology, evolution of the genome, and some biochemical laboratory techniques for proteins and DNA. Field trips may be required.d.
Prerequisite: CHEM 001A or equivalent and placement as determined by the college's multiple measures assessment process or completion of a course taught at the level of intermediate algebra

BIOL-014 - HEAD SMART INTO THE SCIENCES

Thinking about being a scientist? Consider a major in Biology! The goal of this course is to introduce the wide variety of science pathways, careers in the Bay Area and strategies to help you do well in your future laboratory classes and beyond. This class includes field trips to research institutions such as San Jose State, opportunity to present your own research and the chance to build relationships with fellow students heading down the same pathway to a science career. You are invited to join Biology professors and student tutors in a supportive community that will guide you through your time at Evergreen Valley College and beyond.

BIOL-020 - HUMAN BIOLOGY

This course introduces students to biology using humans as the exemplary organism. It covers the scientific method, biological chemistry and molecules, cell structure, evolution and the biological relationship of humans to all organisms, common human pathogens, human organ systems, human genetics and biotechnology, and the effect of human interactions with the environment. The course is intended for non-science majors.

BIOL-062 - PLANTS AND HUMAN WELFARE

Students are introduced to the world of plants and their ecological importance to humans. Plants provide the oxygen we need to breathe and the food we need to eat. Students will learn about plant anatomy, flowers and fruits, genetic modification of plants, nutrition, agriculture, gardening, plants for material, medicinal plants, poisonous plants, algae, fungi and diseases. Discussions include the impact of plants on the development of civilizations, the need for conservation, and the role of plants in the total environment.

BIOL-065 - WILDLIFE BIOLOGY

This course is an introductory, non-majors survey of biological science using wildlife systems as a unifying framework to develop scientific literacy and an understanding of science as a method of inquiry. Course content includes examination of fundamental biological and ecological principles, including evolution, population dynamics, energy flow, and species interactions, with emphasis on observation, hypothesis testing, evidence-based reasoning, and application of biological theory. Real-world wildlife case studies are used to illustrate analysis of data, comparison of competing scientific explanations, assessment of uncertainty, distinctions between scientific theory and common usage, and science as a human endeavor shaped by assumptions, limitations, ethical considerations, and societal values, highlighting the relevance of scientific reasoning to informed citizenship and everyday decision-making. Field trips may be required.

BIOL-071 - HUMAN ANATOMY

This course covers the structure of the human body including identifying parts, understanding interrelationships, and making clinical applications. Laboratory activity includes the study of models, dissection of a human cadaver and other selected mammalian organs, and use of the microscope to study different cell types and major tissue types. This course is primarily intended for nursing, OT, PT, RT, Chiropractic, and other health-related majors.
Prerequisite: BIOL 020 or BIOL 021 or (BIOL 004A and BIOL 004B) all with C or better or AP Biology Exam with a 3, 4 or 5

BIS-161 - COMPUTERIZED MED OFFICE PROC

This course introduces students to a medical billing software application. Students will input patient information, schedule appointments, input billing information, organize and file patient records. Maintaining an office system will be emphasized. This course also includes a medical office simulation.

Subject: CHEM

CHEM-001A - GENERAL CHEMISTRY

This is the first course in general chemistry with lab, for science and pre-professional majors. It covers basic chemical principles: nomenclature, atomic structure, quantum theory, molecular structure and bonding, periodic properties, chemical reactions, stoichiometry, thermochemistry, states of matter, gas laws, solutions, oxidation-reductions, and molecular equilibrium. The role that chemistry plays in everyday life, industry, and human welfare is emphasized.
Prerequisite: CHEM 015 with C or better and course taught at the level of intermedicate algebra or placement as determined by the college's multiple measures process

CHEM-015 - FUNDAMENTALS OF CHEMISTRY

This course covers the fundamentals of modern inorganic chemistry with emphasis on atomic structure, chemical bonding, chemical formulas, nomenclature, equations, stoichiometry, gas laws, solutions and related topics. It is intended primarily as a preparation for the Chemistry 001A and 001B sequence. The central nature of chemistry among other branches of science is stressed, and examples of the important role that chemistry plays in our lives are presented.

CHEM-015 - FUNDAMENTALS OF CHEMISTRY

This course covers the fundamentals of modern inorganic chemistry with emphasis on atomic structure, chemical bonding, chemical formulas, nomenclature, equations, stoichiometry, gas laws, solutions and related topics. It is intended primarily as a preparation for the Chemistry 001A and 001B sequence. The central nature of chemistry among other branches of science is stressed, and examples of the important role that chemistry plays in our lives are presented.

Note: This is a traditional in-person, ON-CAMPUS class with scheduled meetings on the days and times listed above. Class may be web-enhanced using Canvas and/ or other applications. For additional class-specific requirements, please email the course instructor.

CIT-041J - JAVASCRIPT/DYNAMIC HTML

This course is intended for students with some knowledge of programming. It covers the use of JavaScript language to dynamically modify nearly all aspects of a web page, including images, links, text, and styles. Additionally, JavaScript will be used to validate forms, create data that persists across pages, and handle user input, including mouse and keyboard events. The course also introduces the standard Document Object Model that is used to represent web pages, and is also used by other technologies such as XML. Debugging techniques and best practices for writing code will be covered.

COMSC-010 - INTRO TO COMPUTER SCIENCE

This is an introductory course for students with no prior exposure to computer science. It prepares students for future computer science courses to utilize programming to solve problems in their field of study. It also presents an overview of the computer systems, networking and applications of computer science, as well as an introduction to the fundamentals of programming concepts.

Hybrid		Not recorded	01/25/27 - 05/21/27	CANVAS	Ho, Jack; Jensen, Kathy

Note: This class is a combination of online learning in CANVAS and scheduled ZOOM class meetings on days and times noted above. Students are required to attend the scheduled Zoom class meetings. For additional class-specific requirements, please email the course instructor.

COMSC-020 - INTRODUCTION TO PROGRAMMING

This course is an introduction to basic computer programming concepts using both the procedural and an object-oriented paradigm. It is intended for non-computer science majors, and for students interested in COMSC 075 who would like a more gradual entry into computing fundamentals. Topics include hands-on practice with software engineering tools, simple programs, variables, control structures, functions, input/output, and introduction to abstraction. Specifications, adherence to style guidelines, and the importance of testing to ensure that programs are usable, robust, and modifiable, will be addressed throughout the course.

COMSC-028 - DATA SCIENCE

This course introduces students to the field of Data Science through computational and inferential thinking. Given data arising from some real-world problem, students will learn the fundamental skills in computer programming and statistical inference needed to analyze that data so as to understand and solve that problem. The course also addresses social issues surrounding data analysis, such as privacy, security, and design.

COMSC-041 - PROG CONCEPTS AND METHOD I

This course is an introduction to computer science using the C++ programming language. Students will write computer programs that include control structures, iteration, methods and argument passing, and classes. Problem solving, documentation, programming style, and program design and development are addressed throughout the course.
Prerequisite: MATH 021 and MATH 022, or MATH 025 all with C or better

COMSC-042 - PROG CONCEPTS & METHODOLOGY II

In this course, students will apply software engineering techniques to the design and development of large programming projects using C++. It includes coverage of data abstraction and structures, as well as associated algorithms, for linear lists, stacks, queues, trees, and other linked structures, arrays, strings, and hash tables. Searching and sorting algorithms are also covered.
Prerequisite: COMSC 041 with C or better

COMSC-050 - INTRO TO LINUX/UNIX

This is an introductory course in the Linux/Unix operating system. It covers a basic editor, file and directory manipulation, processes, standard files, and access permission. The course also addresses the bash shell, including the shell command line, setup, customizing the shell environment, the alias mechanism, pipes, filters, and I/O redirection. Additionally, document formatting packages and system administration are briefly introduced.

COMSC-078 - PROGRAM STRUCTURES

This course covers the elements of the functional, object-oriented, and declarative programming paradigms. Topics include procedural abstraction; control abstraction using recursion, higher order functions, generators, and streams; data abstraction using interfaces, objects, classes, and generic operators; and language abstraction using interpreters and macros. This course also requires programming in Python. The central idea in this course is the management of program complexity through abstraction.

Subject: COUNS

COUNS-001 - CROSS-CULTURAL IDENTITY DEVT

Students will examine the formation and development of human identity through theories and concepts drawn from counseling, developmental, social, and educational psychology. This course will analyze theoretical frameworks and research methods of identity development, academic self-concept, self-regulation, motivation, and the role of social and cultural environments in identity formation. Students will explore issues of inequality, social justice, and human agency from comparative perspectives, including race and ethnicity, gender, and cultural groups.

COUNS-014 - COLLEGE SUCCESS

This course surveys effective study skills and methods by contrasting ineffective study habits with techniques that maximize learning and memory. Emphasis is on promoting healthy changes in lifestyle that manage stress, improve health and overall well-being. Techniques to change behavior such as setting goals, managing time, increasing concentration, and controlling procrastination are practiced. Lecture topics include effective listening and note-taking skills, textbook reading, marking and vocabulary systems, memory strategies, and research paper methods using library resources. This course orients students to transition to college course expectations and procedures.

EDIT-010 - COMPUTERS & DIGITAL MEDIA

This course will guide students through implementing instructional technology, including AI-powered tools and adaptive learning systems, into educational environments. The course explores how online learning platforms, educational applications, virtual/augmented reality, and artificial intelligence can be integrated with sound pedagogy and digital media to create engaging, personalized learning experiences. Ethical considerations, data privacy, digital equity, and hands-on experience with contemporary edtech tools while developing critical evaluation skills for selecting technology solutions will also be covered.

EDIT-015 - ONLINE COURSE DESIGN

This course introduces students to the foundations and practices at the heart of the differences between the online and traditional classroom. Students will gain proficiency in the unique qualities and perspectives of online teaching. It will also walk students through the pertinent federal, state, and local regulations impacting online teaching, to set them on a path to designing successful online courses. Central to the design skills that students will gain is the effective use of digital tools that form the online learning management system (LMS). Digital tools that are integrated into the LMS are also covered, as well as other tools that cover basic graphic design as well as audio and video production that enhance student learning and equitable access for all students.

EDIT-022 - ONLINE COURSE DEVELOPMENT

This course offers a hands-on approach to designing courses and utilizing current Learning Management System (LMS) tools to create content for various online formats. Students will be guided through the California Virtual Campus - Online Education Initiative (CVC-OEI) Course Design Rubric, emphasizing the creation of not just functional but also high-quality, innovative online courses. Course customization focusing on design, interaction, collaboration, assessment, and learner support, with a strong emphasis on Artificial Intelligence (AI) integration will be covered. Special attention will be given to implementing Regular and Substantive Interaction (RSI), ensuring courses meet federal and accreditation standards for instructor presence and engagement.

EDIT-023 - ACCESSIBLE COURSE CONTENT

This course provides a comprehensive exploration of accessibility and inclusive design in online learning environments, integrating contemporary AI-assisted tools and Universal Design for Learning (UDL) principles. Participants learn to create, evaluate, and enhance course content that is both technically accessible and pedagogically inclusive for diverse learners. The course emphasizes practical application of accessibility standards (WCAG 2.2, Section 508), ethical AI integration, and evidence-based strategies for designing equitable digital learning experiences using Learning Management Systems (LMS), common productivity tools, and emerging AI technologies.

EDIT-502 - AD ED FOUNDATIONS

In this course, candidates will learn the historical, legal, social, political and economic perspectives of Adult Education. They will understand how Adult Education can serve their region to enrich the local common workers, parents, and community members. They will be able to describe adult education funding sources, as well as the local, state and federal structure of Adult Education and how those structures impact the adult education program. They will understand the California Adult Education Program (CAEP) and the requirements for accurate, timely reporting. They will identify sources for current research as well as understand the principles of teaching adult learners, and the theories of adult development stages, brain-based learning, and self-directed learning. Candidates will also demonstrate strategies to foster self-esteem and respect, and how to communicate effectively with their students, along with conflict resolution. Candidates will also prepare a personal teaching philosophy based on theories of adult learning.

ENGL-073 - INTRODUCTION TO SHAKESPEARE

Students will be introduced to Shakespeare as a major figure in our literary heritage and will read selected works, including represented plays, sonnets and poems. Contributions from the Elizabethan era to Western culture will be explored. The course is designed to heighten awareness of Shakespeare's literary contribution to society and the relationship of the student to his work.
Prerequisite 1: Eligible for ENGL C1000; Prerequisite 2: Eligible for ENGL C1000

ENGL-086B - SURVEY ENGLISH LITERATURE II

This is the second part of a two part series surveying the development of English (Anglophone) Literature from the 18th Century to the present. The course will present significant examples of epic, lyric, drama and prose writings of the finest authors writing in England and the British Empire from the Romantic, Victorian, Edwardian, Modern and Postmodern periods. The course will contain lectures, discussions, group work, and other student centered learning activities. Evaluations will be based on in- and out-of-class analytical essays, examinations, research reports, and class work.

ENGL-C1001 - CRITICAL THINKING AND WRITING

In this course, students receive instruction in critical thinking for purposes of constructing, evaluating, and composing arguments in a variety of rhetorical forms, using primarily non-fiction texts, refining writing skills and research strategies developed in ENGL C1000 College Reading and Writing (C-ID ENGL 100) or similar first-year college writing course. Formerly ENGL 001C.
Prerequisite: ENGL C1000 or college-level composition (ENGL C1000/C-ID ENGL 100) or equivalent with C or better

Reg ID 134505 | Section 220 | 3 units | Active

Zero textbook cost | Cal-GETC 1B

Enrollment 0 / 28 | Open seats: 28 | Waitlist: 0 | Open seats

ENGL-C1002 - INTRO TO LITERATURE

In this course, students are introduced to works by diverse authors and major literary genres, developing close reading and analytical writing skills. Students also develop appreciation for and critical understanding of the cultural, historical, and aesthetic qualities of literature. This will include a wide variety of literature, including fiction, drama, poetry, with an emphasis on critical writing. Formerly ENGL 001B.
Prerequisite: ENGL C1000 with C or better, College-level composition (ENGL C1000/ENGL C1000H/ENGL C1000E/C-ID ENGL 100) or equivalent

ENGR-010 - INTRODUCTION TO ENGINEERING

This course provides an in-depth exploration of engineering disciplines, the diverse roles engineers play in various industries, and educational pathways. The course equips students with strategies to optimize their academic success, introduces problem-solving tools, and highlights the engineer's connection with society and ethical responsibilities. It also focuses on improving communication skills relevant to engineering professions. Additionally, the course offers a dynamic, hands-on exploration of engineering, emphasizing computer-aided problem-solving and design projects. It provides a holistic learning experience, encompassing both technical and non-technical skills, with a strong focus on teamwork and engineering problem analysis throughout the design process.

ENGR-018 - ENGINEERING GRAPHICS AND CAD

This introductory engineering graphics course is fundamental for mechanical engineering and civil engineering majors, as it provides the core visualization and technical drawing skills needed to interpret and create engineering designs. The objective of this course is not to train students as CAD drafters, but rather to teach visual communication as a foundational engineering skill, to build fluency in the basic language of engineering graphics, and to develop essential competency with modern engineering graphics software. The course covers the principles of technical drafting and the use of engineering drawings to communicate design intent. It introduces students to the engineering design process and develops proficiency in orthographic projection, dimensioning and tolerancing practices, and freehand sketching. Hands-on use of computer-aided design (CAD) software is a central and required part of the course. CAD is used extensively throughout the course to create 2-D drawings and 3-D solid models that support all major course topics.
Prerequisite: MATH 022 or MATH 025 with C or better or placement by multiple measures

ENGR-030 - MATLAB

This course typically fulfills the programming requirement for students majoring in mechanical engineering, civil engineering, or aerospace engineering. It employs the MATLAB (or equivalent) environment as a tool to equip students with a functional understanding of computer-based problem-solving techniques applicable to the fields of science and engineering. The course offers an introduction to the core concepts of both procedural and object-oriented programming, numerical analysis, and data structures. Throughout the course, practical examples and assignments are drawn from real-world applications in engineering, physics, and mathematics, enabling students to apply their newly acquired knowledge to tangible scenarios in these disciplines.

ENGR-061 - PLANE SURVEYING

This course is designed for students majoring in civil engineering or construction management. It offers an extensive exploration of plane surveying, involving the application of theoretical principles and concepts, office computations, and the operation of surveying field equipment. The course also delves into the production of engineering plans and maps. Students will engage with various topics, including distance measurements, angle and direction calculations, differential leveling, traversing, property and boundary surveys, topographic surveys, volume and earthwork computations, analysis of horizontal and vertical curves, land description techniques, and the utilization of GPS technology. Throughout the course, students will gain hands-on experience through substantial fieldwork, where they will utilize tools such as tapes, levels, transits, theodolites, total stations, and GPS equipment to reinforce their practical skills and understanding of surveying techniques.

ENGR-069 - STATICS

This introductory engineering mechanics course is essential for students majoring in mechanical engineering or civil engineering, as it lays the foundation for most upper-division coursework. The course covers fundamental concepts, including the properties of forces, moments, couples, as well as the analysis of two- and three-dimensional force systems on engineering structures in equilibrium. It explores topics such as truss and beam analysis, distributed forces, shear and bending moment diagrams, center of gravity, centroids, friction, and area and mass moments of inertia.
Prerequisite: PHYS 007A and MATH 067 with C or better

ENGR-071 - INTRO TO CIRCUIT ANALYSIS

This course is fundamental for electrical engineering and computer engineering majors, as it lays the foundation for most upper-division coursework in these fields. It provides a comprehensive exploration of electrical circuits, emphasizing the application of circuit laws and network theorems through analytical techniques. The course encompasses the analysis of circuits containing various components, such as resistors, capacitors, inductors, and operational amplifiers, in both DC and AC scenarios. Topics covered include the natural and forced responses of RLC circuits, phasors, AC power calculations, power transfer, and energy concepts. Furthermore, students will gain exposure to the construction and measurement of electrical circuits, becoming proficient in using electrical testing and measurement instruments like multimeters, oscilloscopes, power supplies, and function generators. They will also learn to work with circuit simulation software and interpret both measured and simulated data based on circuit analysis principles, catering to DC, transient, and sinusoidal steady-state conditions. Practical aspects, including component value tolerance and non-ideal characteristics of laboratory instruments, will be addressed, along with the construction and measurement of basic operational amplifier circuits.
Prerequisite: PHYS 007B and MATH 078 both with C or better or concurrent enrollment in MATH 078.; Prerequisite Previous Or Concurrent: MATH 078 previous or concurrent

ENVIR-010 - ENVIRONMENTAL SCIENCE

This is an interdisciplinary course that covers the interaction between human societies and the environment. Important physical and biological properties necessary for life on Earth will be discussed. Students will be tasked with exploring major issues that are bound to affect the future of humans on our planet, including population growth, resource exploitation, pollution, climate change, and the loss of biodiversity. Lectures will also discuss environmental policies and the prospects for a sustainable future. Field trips may be required.

ETH-010 - INTRO TO ETHNIC STUDIES

Students will critically explore the phenomena of race and ethnicity in the history of the United States. Examining the socio-political realities of power, students analyze the processes by which racial stratification occur. Particular emphasis is placed on the socio-historical experiences of major, subordinate ethnic groups in America --African Americans, Latina/o Americans, Asian Americans, and Native Americans. Students critically analyze major theoretical approaches to understanding the circumstances that have shaped present race relations in America and various Ethnic Studies paradigms.

ETH-011 - ETHNIC IMAGES IN FILM

This course is an introductory study of the relationship between film and culture. It critically examines film as an active tool of cultural production in the U.S., interrogating dominant portrayals as well as multiple perspectives across marginalized communities. Through an interdisciplinary and intersectional approach, it explores how power is conveyed, perpetuated, and disrupted in the dynamic images representing race, ethnicity, culture, class, gender, sexual orientation, age, religion, and disability across American film.

ETH-035 - SOCIOLOGY-CHICANX EXPER

This course focuses on the Chicanx and their relation to U.S. society. It will address some critical areas of the Chicanx experience in terms of identity, economics, labor, immigration, stereotypes, religion, and police-Chicanx conflict. In order to provide a real-world analysis of the contemporary role of the Chicanx in society, this course will include a Service-Learning component with a focus on the Chicanx community of San Jose. A central objective of the course is to base both skill development and content on issues that are of personal and academic interest to the student. The ultimate objective is to use this analysis to come up with strategies for addressing the needs of the Chicanx and other communities with similar circumstances.

ETH-040 - VIETNAMESE AMER.CULTURE/EXP-AS

This course provides students with a basic theoretical background to critically situate Vietnamese American lives within the contexts of racialization, white supremacy, and settler colonialism. It draws upon scholarly, literary, and artistic production across disciplines and by multiple agents, including Vietnamese Americans, to expose and interrogate the orchestration of war and militarism, coerced displacement, global capitalism, and racialization. It also explores questions of gender, sexuality, class, religion, generation, transnationalism, community-building, and social justice political activism that intersect with Vietnamese American lives and creative expression.

HIST-035 - CALIFORNIA HISTORY

This course analyzes the heritage and development of California from its beginnings with emphasis on the geography, natural resources, economic, social, ethnic, multicultural, and political forces that shaped the modern state. The Golden State's phenomenal growth and multicultural changes are emphasized. We will examine the Native American, Spanish, Mexican, and American periods. We will investigate the complex and sometimes violent process of populating, repopulating, and settling this region through immigration on the western edge of the American frontier. We will explore the cultural construction of the "California Dream" and evaluate how different groups have responded to its promises of opportunity and social renewal. The often-ignored voices of women, minority ethnic, and gender groups are an integral part of the course's narrative. Lastly, we will examine the historical origins of important issues confronting California today.

Subject: LA

LA-010 - INTRO TO LAW

This course provides an introduction to law, legal research, constitutional law, legal ethics, litigation, and the legal process while helping students build the foundational skills necessary to succeed in advanced paralegal courses and in professional careers. The course includes an overview of constitutional law and court systems, a survey of legal ethics, an introduction to legal research methods, and an examination of current careers for legal professionals. Course objectives include the development of a working knowledge of the legal system, acquisition of basic legal research skills, and an understanding of current ethical guidelines in the law.

LA-038 - FAMILY LAW

This course covers the substantive law in the area of family law or domestic relations. Subjects covered will include dissolution of marriage, adoptions, guardianship, child/spousal/family support, child custody, and paternity. The class will train the student in the skills necessary to work as a paralegal in the area of family law. Content will include the use of Judicial Council forms, the preparation of pleadings, drafting of declaration, preparation of Income and Expense Declaration Form, the drafting of property settlement agreements, and the use of interviewing checklists.

LA-071 - LEGAL RESEARCH

This course provides an overview of the essential techniques used to research legal issues. It will cover the process of finding, selecting, and utilizing appropriate sources of law in the library and in online databases such as Westlaw and Lexis. The course coverage includes primary sources of law such as federal and state constitutions, statutes, cases, and regulations, as well as secondary sources that include legal dictionaries, encyclopedias, digests, summaries, and articles. It will also explain how to update statute and case law using tools such as KeyCite and Shepard's citators. The course will include basic legal analysis and writing assignments which draw upon research results.

MATH-067 - CALCULUS II LATE TRANS.

This is the second course in calculus for students majoring in Computer Science, Data Science, as well as the Natural Sciences, Technology, Engineering, or Mathematics. Students will study techniques of integration and its applications, numerical integration, improper integrals, and introduction to differential equations. Topics also include sequences, infinite series, polynomial approximations of functions, power series including Taylor and MacLaurin series, and calculus of parametric and polar equations.
Prerequisite: MATH 066 with C or better

Subject: MATH

MATH-078 - DIFFERENTIAL EQUATIONS

The course is an introduction to ordinary differential equations including both quantitative and qualitative methods as well as applications from a variety of disciplines. It develops techniques and theories needed to solve ordinary differential equations and their applications, including methods for solving first-order differential equations, linear differential equations of higher orders, and systems of linear differential equations. Students are introduced to Laplace transforms, series solutions, and some theoretical aspects of differential equations such as existence and uniqueness of solutions, the phase plane, and stability of equilibrium solutions for autonomous equations.
Prerequisite: MATH-072 or MATH 067 with C or better

MATH-079 - LINEAR ALGEBRA

This course is designed for students majoring in math, statistics, physics, computer science or engineering. It develops the techniques and theory needed to solve systems of linear equations using matrices and determinants. It also investigates the properties of vector spaces. These topics will be mainly presented including orthogonality and inner product spaces, eigenvalues and eigenvectors, linear transformations and their applications.
Prerequisite: MATH 067 or MATH 072 with C or better

Subject: MUSIC

MUSIC-010A - MUSIC THEORY I

A continuation of Introductory Music. This course, through guided composition and analysis, incorporates the following concepts: rhythm and meter; basic properties of sound; intervals; diatonic scales and triads; diatonic chords, basic cadential formulas and phrase structure; dominant seventh; figured bass symbols; and non-harmonic tones. Development of skills in handwritten notation is expected.

MUSIC-023 - CLASS VOICE

This course is designed for intermediate-advanced singers to improve their technique and performance and interpretive skills. Study and testing materials are drawn from a graduated series of vocal exercises, etudes, and representative vocal solos. The student will learn how to assess and provide the stylistic nuances and phrasing concepts required for the performance of repertoire from the Renaissance to the modern day. The course will also include individualized instruction in folk songs and classical music indigenous to various cultures.
Prerequisite: MUSIC 053B with C or better

NURS-014A - MENTAL HEALTH NURSING

This course will focus on theory and practice of mental health and psychiatric nursing. Using biopsychosocial paradigm, student will explore risk factors, pathophysiology, clinical manifestations and treatment modalities used in nursing management of common alterations in mental health. Students will apply nursing sciences in a variety of mental health and psychiatric care settings, where they will practice provision of nursing care to individuals and groups experiencing alterations in mental health.
Prerequisite: NURS 013 with C or better

Note: This is a traditional in-person, ON-CAMPUS class with scheduled meetings on the days and times listed above. Class may be web-enhanced using Canvas and/ or other applications. For additional class-specific requirements, please email the course instructor.

NURS-014B - NURSING CARE OF ADULTS II

This capstone course includes advanced medical surgical nursing, geriatrics, leadership and management, including preceptorship. In advanced medical surgical nursing, critical thinking and leadership concepts are applied to the management and care of multiple clients in adult and geriatric settings. During preceptorship, in collaboration with a registered nurse, the student will provide optimal client outcomes by applying concepts learned throughout the nursing program.
Prerequisite: NURS 014A with C or better

NURS-109 - CNA/HHA

This course focuses on nursing assistant and home health aide skills/concepts performed under the direct supervision of a nurse. It is designed to provide a foundation of basic nursing care. Topics include infection control, vital signs, safety & body mechanics, feeding techniques, bed making, elimination needs, and grooming/hygiene. Communication skills, cultural awareness & sensitivity, and client rights will also be addressed. Application of these skills will occur in a skills lab and skilled nursing facility. Students are also introduced to anatomy and common diseases. Successful completion of the course qualifies the student to take the CA state certification exam.

PHIL-010 - INTRODUCTION TO PHILOSOPHY

This course introduces philosophical ideas and methods concerning knowledge, reality, and values from diverse, world philosophical traditions. Expected topics will include the sources and limits of knowledge, and the nature of reality. Other topics that may be examined from a philosophical perspective include the nature of the self, truth, ethics, religion, science, language, beauty and art, political theory, and the mind.

PHIL-055 - CRITICAL THINKING AND WRITING

This course develops the practices of critical thinking and academic writing through the study of critical reasoning, inquiry driven research, formal argumentation, and argumentative writing. The development and refinement of critical thinking skills necessary for the evaluation and production of both academic and argumentative writing will be emphasized. This includes the study of the application of these skills in everyday situations such as moral thinking, problem-solving, belief formation, and decision-making. Additionally, arguments will be studied within the context of philosophical issues, texts, and subject matter.
Prerequisite: ENGL C1000 with C or better

PHIL-060 - THE ART OF REASONING

This is an introductory course in informal fallacies and critical reasoning. The course will focus on critical thinking strategies and skills, the elements of an argument, distinctions between deductive and inductive logic, and comparing the strength of arguments. The course will cover causal relations and scientific, statistical, moral, and legal reasoning. The course will present techniques for analyzing arguments used in political rhetoric, advertisements, editorials, scientific claims, social media and social commentary. There is a strong emphasis on the written expression and the application of critical thinking in a series of presentations, compositions, or a term paper.

PHIL-065 - INTRODUCTION TO ETHICS

This course examines the nature of moral reasoning and fundamental moral concepts. Students will compare various approaches to, and theories of, ethics from diverse philosophical traditions. This study will be applied to practical, contemporary moral issues such as social justice, genetic engineering, gender and sexuality, euthanasia, animal rights, and the environment. Sources will include readings from philosophical and scholarly writings, and popular media (such as film and television).

PHYSC-012 - EARTH SCIENCE

This course is an introduction to the main physical processes governing earth's geosphere, atmosphere, and hydrosphere, highlighting interactions of these systems with one another, and with the sun and other solar system bodies. Main topics include formation of the solar system, the theory of plate tectonics, and the interactions of plate tectonics constantly reshaping earth's landscape. It also covers basic physical and chemical processes governing the rock cycle, the types of ocean boundaries, and the evolution of Earth's atmosphere, with special emphasis on the effects caused by climate change on the weather system all over the planet. Field trips may be required.

PSYCH-054 - DRUG USE AND RECOVERY

This introduction course to drug use and recovery reviews the increasing problem of drug use among at-risk populations. A general analysis of drug use will be evaluated to better understand the impact of drug use on the health-span of patients and the importance of seeking human services to decrease relapse. The scope of practice and the problem of drug use will be reviewed and compared to the number of different drugs that are available and are used by at-risk populations. Substances used by various ages, socioeconomic statuses, and ethnic backgrounds will be the focus of this course. In addition, an in-depth analysis of the use of medical and behavioral health interventions implemented in recovery when providing services to patients with various disorders that developed when drugs are used will be reviewed.

PSYCH-055 - BEST PRACTICES

In this course, students are introduced to mental and behavioral health issues. This course will cover the processes of treatment, patient-centered approaches, and how to overcome obstacles when providing individualized patient care. Important cultural competency is reviewed in great detail in order to better understand the concerns that need to be addressed to improve human services. Through the use of case studies, the implications that providers and service seekers encounter will be discussed. A review of the level of service provided will assist in understanding standards and credentialing in the field of mental and behavioral health.

PSYCH-099 - ABNORMAL PSYCHOLOGY

This course introduces the scientific study of psychopathology and atypical behaviors from a variety of perspectives including biological, psychological and sociocultural approaches. The course surveys the multidimensional influences on the diagnosis, etiology, and treatment of abnormal patterns of behavior. Traditional psychological models, as well as current research evidence of the reciprocal relationship of biology and behavior, are used to study psychopathology. Clinical cases are used to examine life-span cultural influences on abnormal behavior.

SOC-019 - SOCIOLOGY OF SEX AND GENDER

This course focuses on the sociological analysis of the social construction of masculinity and femininity historically and cross-culturally. It analyzes the impact of economic and political change on gender expectations and practices. It focuses on the macro-analyses of how institutions shape gender and microanalyses of how individuals are socialized and how they "do" and practice gender. Emphasizes how intersections of gender, race and ethnicity, class, and sexuality shape individual and group experiences.

SPAN-001B - ELEMENTARY SPANISH 2

This is the second of two courses designed to continue the instruction of the elementary Spanish language in a cultural context. It is designed to develop listening, speaking, reading, and writing skills to communicate with Spanish speakers. The material is presented within the context of the cultures, histories, and peoples of Spanish-speaking societies, including the US. Students will interact with authentic language within a Spanish immersion environment.

STAT-C1000 - INTRODUCTION TO STATISTICS

This course is an introduction to statistical thinking and processes, including methods and concepts for discovery and decision-making using data. Topics include descriptive statistics; probability and sampling distributions; statistical inference; correlation and linear regression; analysis of variance, chi-squared, and t-tests; and application of technology for statistical analysis including the interpretation of the relevance of the statistical findings. Students apply methods and processes to applications using data from a broad range of disciplines. Formerly MATH 063.
Prerequisite: Placement as determined by the college's multiple measures assessment process or completion of a course taught at or above the level of intermediate algebra
