Grading: L | **Advisory Level** — **Read: 3** | **Write: 3** | **Math: 0**

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This is an introductory course to the appreciation of the visual arts drawn from a wide variety of media, cultures and time periods. Students will learn to analyze art forms in regards to the elements and principles of art, and will be introduced to various technical procedures and materials, allowing students to make connections regarding these formal attributes and the work's content or meaning. The function and communication of visual arts within societal contexts will also be examined.

[ASTRO 010 - Introduction to Astronomy 3.00 Units](#)

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 3

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This is an introductory science course for non-science majors covering topics of modern Astronomy. It highlights pivotal aspects in the history of Astronomy such as its distinction and further separation from Astrology. It lists the physical processes governing the origins of a star system and indicates the causes of the apparent motion of sky objects and cyclic sky events. The sources of periodical astronomical events such as phases of the moon, solar and lunar eclipses, meteor showers, and seasons are identified and related via the fundamental laws of physics. The astronomical tools of photometry and spectroscopy are introduced for their indispensable role in analysis towards the detection of planets around other stars, the investigation of dark matter and dark energy, and the ongoing search for extraterrestrial life. Additional topics include the origins of galaxies, large scale structure, and a full description of the Big Bang theory.

This is an introductory laboratory course in Astronomy designed for non-science majors. It incorporates substantial number of contact hours at the Montgomery Hill Observatory, making use of the state of the art telescopes, CCD cameras, and various adapters for cell phones. Students will identify constellations and asterisms, measure the apparent motion of planets and stars, and investigate the geology of terrestrial objects throughout the solar system. A series of lab exercises will demonstrate main behaviors of light and its interaction with matter. This course will cover the different stages of stellar evolution, making use of computer simulations to illustrate changes in size and energy output of stars, as they age. Course work will conclude with explorations on large scale structures such as galaxies, clusters of galaxies, and the expanding Universe.

This course introduces students and entry level automotive technicians to the automotive electrical system. The course covers DC electrical theory, magnetism, Ohm's law, series and parallel circuits, passive components, and system dynamics. Students learn to calculate and measure voltage, resistance and current in theoretical and live circuits, build and test working models of typical automotive electrical systems using table top components and industry specific simulators, and practice diagnosis and repair procedures on a variety of vehicles. Students will also develop an understanding of modern electrical test equipment, such as DMMs, GDMMs, and DSO's, and industry standard troubleshooting and repair procedures. This course will prepare students for the ASE A6, Automotive Electrical Systems, certification examination.

This course will examine a variety of alternative fuels and propulsion systems used in modern automotive vehicles. The advantages and limitations of alternative fuels used in internal combustion engines (ICE) will be discussed. The topics on alternative propulsion systems will include the basic theory of operation, construction, and safety. The unique dangers surrounding alternative fuel and propulsion vehicles will be explored and how to minimize the risks. This course will also cover what is needed to operate safely and effectively around these vehicles.

Thinking about being a scientist? Consider a major in Biology! The goal of this course is to introduce the wide variety of science pathways, careers in the Bay Area and strategies to help you do well in your future laboratory classes and beyond. This class includes field trips to research institutions such as San Jose State, opportunity to present your own research and the chance to build relationships with fellow students heading down the same pathway to a science career. You are invited to join Biology professors and student tutors in a supportive community that will guide you through your time at Evergreen Valley College and beyond.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 2

Transfer Status: CSU | **Degree Applicable:** AA/AS

Students are introduced to the world of plants and their ecological importance to humans. Plants provide the oxygen we need to breathe and the food we need to eat. Students will learn about plant anatomy, flowers and fruits, genetic modification of plants, nutrition, agriculture, gardening, plants for material, medicinal plants, poisonous plants, algae, fungi and diseases. Discussions include the impact of plants on the development of civilizations, the need for conservation, and the role of plants in the total environment.

Prerequisite: MATH 013 with P grade or placement by multiple measures

Recommended: MATH 013 may be taken prior or concurrent with CHEM 015.

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This course covers the fundamentals of modern inorganic chemistry with emphasis on atomic structure, chemical bonding, chemical formulas, nomenclature, equations, stoichiometry, gas laws, solutions and related topics. It is intended primarily as a preparation for the Chemistry 001A and 001B sequence. The central nature of chemistry among other branches of science is stressed, and examples of the important role that chemistry plays in our lives are presented.

This course is intended for students with some knowledge of programming. Students learn to use JavaScript language to dynamically modify nearly all aspects of a web page, including images, links, text, and styles. Students also use JavaScript to validate forms, create data that persists across pages, and handle user input, including mouse and keyboard events. The course also introduces the standard Document Object Model that is used to represent web pages, and is also used by other technologies such as XML. Students study debugging techniques and best practices for writing code.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 2

Recommended: Basic knowledge of computer usage and keyboarding skills

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This course is an introduction to basic computer programming concepts using both the procedural and an object-oriented paradigm. It is intended for non-computer science majors, and for students interested in COMSC 075 who would like a more gradual entry into computing fundamentals. Topics include hands-on practice with software engineering tools, simple programs, variables, control structures, functions, input/output, and introduction to abstraction. Specifications, adherence to style guidelines, and the importance of testing to ensure that programs are usable, robust, and modifiable, will be addressed throughout the course.

This course introduces students to the foundations and practices at the heart of the differences between the online and traditional classroom. Students will gain proficiency in the unique qualities and perspectives of online teaching. It will also walk students through the pertinent federal, state, and local regulations impacting online teaching, to set them on a path to designing successful online courses. Central to the design skills that students will gain is the effective use of digital tools that form the online learning management system (LMS). Digital tools that are integrated into the LMS are also covered, as well as other tools that cover basic graphic design as well as audio and video production that enhance student learning and equitable access for all students.

This course teaches the skills and knowledge necessary to create effective online learning environments using the current Course Management System (CMS). Students will explore examples of the content, learn to navigate the interface, add tools and content, and perform basic course management functions. This course also integrates the Course Design Rubric to train faculty how to not just build courses in the CMS, but how to build quality courses. Students will learn to customize their courses, focusing on course design, interaction and collaboration, assessment, and learner support. By the end of the course they should have an in depth understanding of Canvas tools and be ready to begin using this CMS for their classes.

This course provides an in-depth exploration of engineering disciplines, the diverse roles engineers play in various industries, and educational pathways. The course equips students with strategies to optimize their academic success, introduces problem-solving tools, and highlights the engineer's connection with society and ethical responsibilities. It also focuses on improving communication skills relevant to engineering professions. Additionally, the course offers a dynamic, hands-on exploration of engineering, emphasizing computer-aided problem-solving and design projects. It provides a holistic learning experience, encompassing both technical and non-technical skills, with a strong focus on teamwork and engineering problem analysis throughout the design process.

This course covers the principles of engineering drawings in visually communicating engineering designs and an introduction to computer-aided design (CAD). Topics include the development of visualization skills; orthographic projections; mechanical dimensioning and tolerancing practices; and the engineering design process. Assignments develop sketching and 2-D and 3-D CAD skills. The use of CAD software is an integral part of the course.

This course is designed for students majoring in civil engineering or construction management. It offers an extensive exploration of plane surveying, involving the application of theoretical principles and concepts, office computations, and the operation of surveying field equipment. The course also delves into the production of engineering plans and maps. Students will engage with various topics, including distance measurements, angle and direction calculations, differential leveling, traversing, property and boundary surveys, topographic surveys, volume and earthwork computations, analysis of horizontal and vertical curves, land description techniques, and the utilization of GPS technology. Throughout the course, students will gain hands-on experience through substantial fieldwork, where they will utilize tools such as tapes, levels, transits, theodolites, total stations, and GPS equipment to reinforce their practical skills and understanding of surveying techniques.

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This introductory engineering mechanics course is essential for students majoring in mechanical engineering or civil engineering, as it lays the foundation for most upper-division coursework. The course covers fundamental concepts, including the properties of forces, moments, couples, as well as the analysis of two- and three-dimensional force systems on engineering structures in equilibrium. It explores topics such as truss and beam analysis, distributed forces, shear and bending moment diagrams, center of gravity, centroids, friction, and area and mass moments of inertia.

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This course is fundamental for electrical engineering and computer engineering majors, as it lays the foundation for most upper-division coursework in these fields. It provides a comprehensive exploration of electrical circuits, emphasizing the application of circuit laws and network theorems through analytical techniques. The course encompasses the analysis of circuits containing various components, such as resistors, capacitors, inductors, and operational amplifiers, in both DC and AC scenarios. Topics covered include the natural and forced responses of RLC circuits, phasors, AC power calculations, power transfer, and energy concepts. Furthermore, students will gain exposure to the construction and measurement of electrical circuits, becoming proficient in using electrical testing and measurement instruments like multimeters, oscilloscopes, power supplies, and function generators. They will also learn to work with circuit simulation software and interpret both measured and simulated data based on circuit analysis principles, catering to DC, transient, and sinusoidal steady-state conditions. Practical aspects, including component value tolerance and non-ideal characteristics of laboratory instruments, will be addressed, along with the construction and measurement of basic operational amplifier circuits.

This is an interdisciplinary course in which students examine the interaction between human societies and the environment. Students will study important physical and biological properties necessary for life on Earth. They will explore major issues that are bound to affect the future of humans on our planet including population growth, resource exploitation, pollution, climate change, and the loss of biodiversity. Students will also consider environmental policies and the prospects for a sustainable future. Field trips may be required. ENVIR-010 meets general education requirements for science with a lab and can be counted as either a life science or as a physical science course.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 0

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This is an introductory course in informal fallacies and critical reasoning. The course will focus on critical thinking strategies and skills, the elements of an argument, distinctions between deductive and inductive logic, and comparing the strength of arguments. Students will study causal relations and scientific, statistical, moral, and legal reasoning. The course will present techniques for analyzing arguments used in political rhetoric, advertisements, editorials, scientific claims, social media and social commentary. There is a strong emphasis on the written expression and the application of critical thinking in a series of presentations, compositions, or a term paper.

This course is an introduction to the main physical processes governing earth's geosphere, atmosphere, and hydrosphere, highlighting interactions of these systems with one another, and with the sun and other solar system bodies. Main topics include formation of the solar system, the theory of plate tectonics, and the interactions of plate tectonics constantly

reshaping earth's landscape. It also covers basic physical and chemical processes governing the rock cycle, the types of ocean boundaries, and the evolution of Earth's atmosphere, with special emphasis on the effects caused by climate change on the weather system all over the planet. Field trips may be required.
